Challenges of App Management in Citrix

Sub-optimal use of the product stack

Path of least resistance can lead of unintended consequences

- Installing applications into your images leading to image sprawl
- Image Corruption from broken uninstalls
- User disruption to deploy applications and updates
- Lengthy Automated Builds
- Deploying applications with traditional deployment products
- Speed of deploying applications on non-persistent desktops

Optimal State

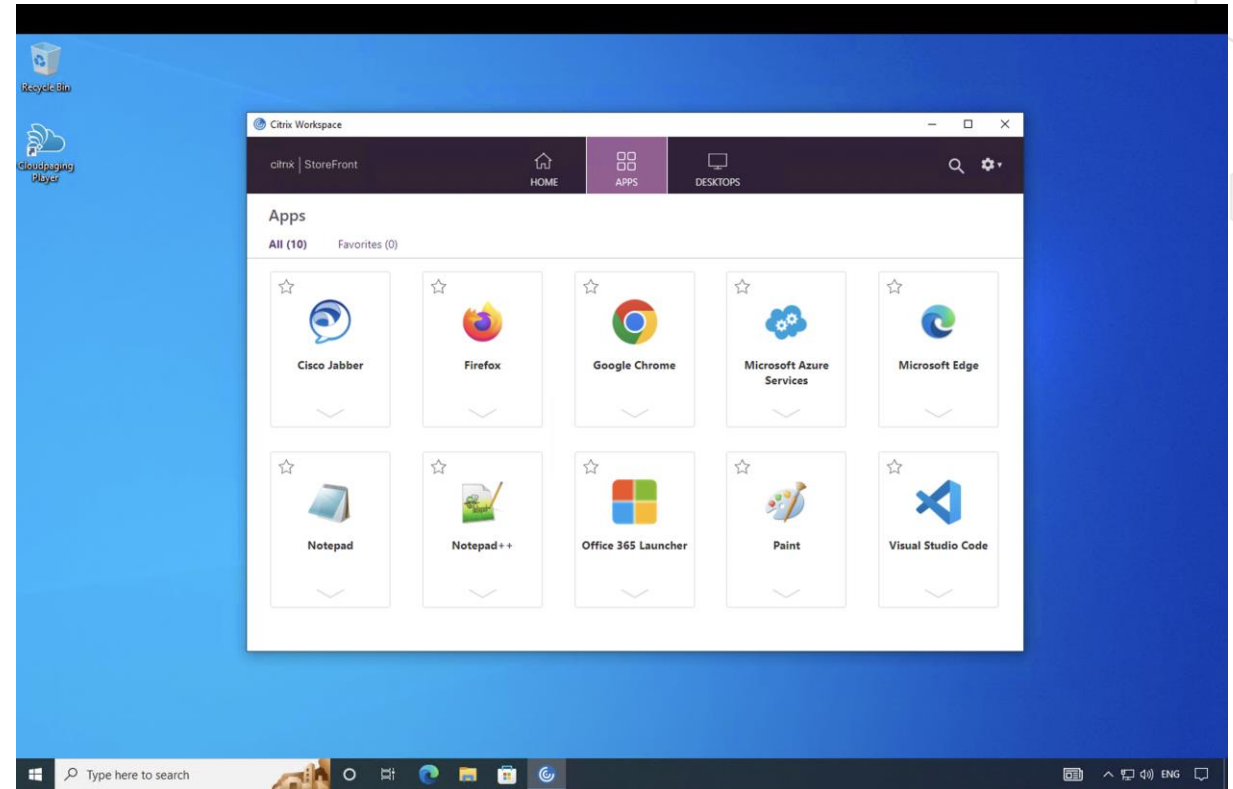

Dynamically provision applications and updates to end users from the cloud

Sometimes less is more

- Fewer Images
- Smaller Images
- Faster Automated Builds

Modernize App Delivery

- Containers are King
- Avoid Setup.exe and MSI
- Scale vs speed (why choose?!)

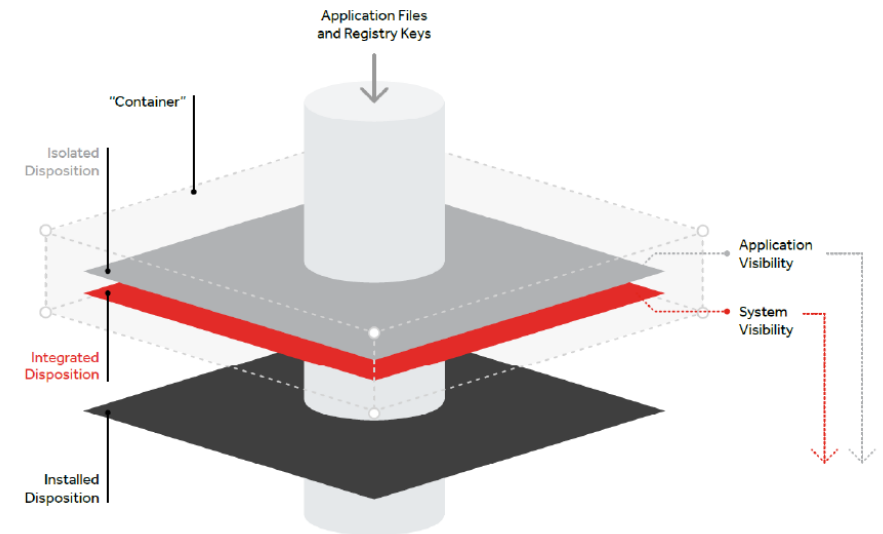

Cloudpaging Application Container

Application Container with a high rate of compatibility

Can manage applications other modernization product can not

- Applications with Drivers
- COM+ Component Services
- Windows Services
- Legacy Applications
- Large Complex Applications e.g. VS 2019, EHR software etc.
- More Info on Documents Shared

The first and only container management platform for Windows desktops

Demo Overview

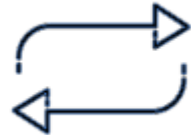

Modern Application Management for Citrix Desktops

Upload and configure
application containers

Dynamically provision
application to an active Virtual
Desktop user session

Deploy and rollback an
application update without user
interruption

Provide an overview of
deployment policies

Better together: Cloudpager enhances the Citrix Experience (Happier admins!)

Demonstration

Time to see Cloudpager for Windows 365 in action!

Summary

Rapidly transform Citrix Virtual Desktops into modern enterprise-ready desktops with Cloudpager

Rapid provisioning of apps and patches without log outs or reboots, including active user sessions

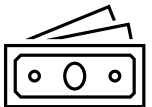

Automated Azure AD integration for rapid onboarding

Full versioning of apps and configurations with application deployment policy enforcement

Instant application rollbacks to prior versions executed by administrators

Reduce costs by achieving a single, lightweight golden image and provisioning apps outside your images
